

NIK HAMIDI WAN HAMAT

Backend Software Engineer

Kuala Lumpur, Malaysia | nikhamidi97@gmail.com | linkedin.com/in/hamidihamat | github.com/nikhamidi

PROFESSIONAL SUMMARY

Backend engineer with 5+ years of experience building production financial, insurance, and creative-industry systems in Rust and Python. Currently developing payment microservices at BigPay (an AirAsia fintech), with prior experience shipping Retrieval-Augmented Generation (RAG) platforms on Azure and scalable Django services. Strong focus on API security (JWT, permission scoping), reliability, and clean service architecture.

TECHNICAL SKILLS

Languages: Rust, Python, JavaScript (Node.js), Dart

Frameworks: FastAPI, Django, Flutter, Node.js

Databases: PostgreSQL, MySQL, MongoDB (Atlas, Beanie ODM), Firebase

Cloud & AI: Google Cloud Platform (GCS), Microsoft Azure, Azure AI Search, RAG pipelines

Tools & Practices: Docker, Git/GitHub, Postman, RESTful API design, JWT authentication, TDD, Agile/Scrum

PROFESSIONAL EXPERIENCE

Backend Engineer

Oct 2025 – Present

BigPay (AirAsia fintech subsidiary) | Kuala Lumpur

- **Designed and built** the Manual Reload service end-to-end — a Rust microservice exposing user-facing and admin APIs for transaction creation, status management, refund initiation, audit logging, and GCS-backed proof-of-payment uploads.
- **Integrated** cooling-off period validation and permission-scoped JWT authentication across every endpoint of the service.
- **Secured** the corporate onboarding flow with short-lived JWT invitation tokens, closing an unauthorized-access gap in business account registration.
- **Diagnosed and fixed** a token-refresh race condition that silently logged authenticated users out mid-session, improving session reliability across the app.
- **Shipped** role-scoped user search for admin tooling, cutting account lookup time for operations teams supporting business customers.
- **Delivered** International Transfer SLA display and cooling-off period UI as part of the remittance product launch.

Backend Engineer (Contract)

Nov 2024 – May 2025

Avanade / Oxydata Software | Kuala Lumpur

- **Developed** and deployed scalable FastAPI services powering a Retrieval-Augmented Generation (RAG) platform for insurance customer service.
- **Improved** retrieval quality and query-resolution speed by integrating Azure AI Search into the RAG pipeline.
- **Designed** JWT-based authentication protecting sensitive customer and claims data, meeting insurance-industry compliance requirements.
- **Built** PDF extraction pipelines that digitized policy documents, claims forms, and customer records for automated analysis.
- **Modeled** MongoDB with Beanie ODM for customer and claims data, and implemented background task processing for long-running document parsing and validation jobs.
- **Established** modular service architecture and routing to support clean integration with third-party insurance systems.

Backend Engineer

Aug 2023 – Jul 2024

Lemon Sky Studios — leading Southeast Asian CGI/game art studio | Petaling Jaya

- **Developed and maintained** custom production-pipeline software used daily by artists across multiple concurrent projects, streamlining studio workflow.
- **Built and containerized** the backend on Django, MySQL, and Docker; owned upgrades and maintenance across releases.
- **Administered** in-house server infrastructure spanning production and UAT environments for development, testing, and deployment.
- **Partnered** with artists and production teams to identify workflow bottlenecks and turn them into shipped tooling improvements.

Junior Backend Engineer

May 2022 – Jul 2023

Tigerlab — insurtech platform serving European insurers | Petaling Jaya

- **Built** insurance web applications and process automation with Django, Python, and PostgreSQL for European insurance clients.

- **Developed** custom Flutter widgets and features within existing Django products, including serializers, templating, and configuration.
- **Implemented** workflow automation and document processing that reduced manual steps in policy handling.

Software Developer

Feb 2021 – Apr 2022

Aisara | Kuala Lumpur

- **Built** stock market prediction models in Python and Node.js, and served them through a Django-backed web application.
- **Integrated** AI models into Flutter mobile applications, including solutions for the oil & gas industry.

EDUCATION

Bachelor of Science in Information Technology (Honors)

Jun 2021

International Islamic University Malaysia | Kuala Lumpur
